Subject: RE: MOL DISTINCTION - Washing system performance

Dear Victor,
Good day.

Happy Chinese new year!

Vessel opened and checked A/E #1 air cooler and air side of the turbocharger last month, and found in good condition, please attached report from VSL.

From this report, we find the engine performance is much better than before, which means, this design is very useful for our engines. Thank you very much for your help.

Tks/warmest regards!

Fengfeng Jiang
